

GAURAV KUMAR

Python Developer | Backend Developer

+91-748-1812-280 | gauravkumarsharma311@gmail.com | linkedin.com/in/gauravkumar311 | github.com/GauravBaba3
Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Python Developer with solid experience in scripting, data pipelines, SQL optimization, and backend data handling. Proven ability to build ETL workflows, optimize database queries, and integrate data-driven logic. Experienced with REST APIs, cloud platforms (GCP), and machine learning pipelines using Scikit-learn. Reduced server response time by 15% and improved page load performance by 30% through backend optimization.

TECHNICAL SKILLS

Languages & Frameworks: Python (Pandas, NumPy, Scikit-learn), SQL, REST APIs, MySQL, Oracle SQL Developer

Backend & Database: MySQL, Query Optimization, ETL Pipelines, Data Modeling, Data Warehousing, Oracle SQL Developer

Data & ML: Pandas, NumPy, Scikit-learn, Random Forest, Hyperparameter Tuning, Feature Engineering, EDA, Statistical Analysis

Cloud & DevOps: Google Cloud Platform, Google BigQuery, Git, GitHub, VS Code, Jupyter Notebook

Visualization: Matplotlib, Seaborn, Power BI

WORK EXPERIENCE

Data Analyst – Trainee (Python & SQL Focus) | Qspiders

Aug 2024 – Present Bengaluru, Karnataka

- Built data pipelines and ETL workflows in Python using Pandas and NumPy to process and transform 10,000+ record datasets.
- reducing query execution time by 20%.** Developed optimized SQL queries (joins, window functions, aggregations),
- cutting manual reporting overhead by 40%.** Applied Python scripting for automated KPI reporting,
- Implemented data validation and cleaning routines to handle missing values, duplicates, and outliers ensuring pipeline reliability.
- Leveraged Google BigQuery on GCP for large-scale data extraction and exploratory analysis workflows.

Web Development Intern (Backend Focus) | NSIC Technical Services Centre

Feb 2025 – Mar 2025 Chennai, Tamil Nadu

- Developed and optimized MySQL backend queries to support data extraction for performance monitoring and reporting.
- Improved server response time by 15% through query restructuring and database-level optimizations.
- achieving a 30% improvement in page load times.** Analyzed backend user interaction data to diagnose bottlenecks,
- Implemented structured data storage practices and collaborated using Git for version control across the team.

PROJECTS

Road Crash Injury Severity Prediction | Python, Scikit-learn, Pandas, NumPy, Random Forest, Jupyter Notebook

- Designed and implemented an end-to-end ML pipeline in Python for injury severity classification on 5,000+ traffic records.
- Executed feature engineering, data validation, and preprocessing to ensure robust model input quality.
- Achieved 85%+ accuracy via hyperparameter tuning and cross-validation; evaluated using precision, recall, and F1-score.
- Identified top risk predictors (speed, road conditions, time of day) via feature importance analysis.

Employee Attrition Analysis | Python, Pandas, NumPy, Seaborn, Matplotlib

- Built a full EDA pipeline in Python to analyze 1,400+ employee records, identifying key attrition patterns.
- Automated data cleaning workflow covering missing values, duplicate removal, and format standardization.
- Revealed that employees with 1–2 year tenure and low satisfaction had 40% higher attrition, producing actionable recommendations.

CERTIFICATIONS

- Google Cloud – Derive Insights from BigQuery Data
- Google Cloud – Prepare Data for ML APIs on Google Cloud
- Google Cloud – Set Up App Dev Environment on Google Cloud
- Deloitte Australia – Data Analytics Job Simulation (Forage) | Python Programming – GUVI
- Introduction to Generative AI – Google | AI For India 2.0 – NSDC

EDUCATION

Bachelor of Engineering in Computer Science and Engineering | CGPA: 7.57/10.0

Anna University, Perambalur, India | July 2021 – July 2025
