Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in Python, SQL, Power BI, and Google BigQuery. Proven ability to design KPI dashboards, build ETL workflows, conduct exploratory data analysis, and apply statistical/ML techniques to deliver actionable business insights. Delivered 40% improvement in reporting efficiency through automated dashboards and 20% reduction in query runtime via SQL optimization.

CORE TECHNICAL SKILLS

Analytics & BI: Power BI, Google BigQuery, Google Analytics, Excel (Pivot Tables, Power Query, VLOOKUP), Matplotlib, Seaborn

Programming & Databases: Python (Pandas, NumPy, Scikit-learn), SQL (Joins, Subqueries, Aggregations, Window Functions), MySQL, Oracle SQL Developer

Data Processes: EDA, ETL Workflows, Data Cleaning, Feature Engineering, Statistical Analysis, Data Warehousing, Data Governance

Machine Learning: Random Forest, Classification Models, Cross-Validation, Hyperparameter Tuning, Confusion Matrix, Precision/Recall/F1

Cloud & Tools: Google Cloud Platform, Jupyter Notebook, Git, GitHub, VS Code

WORK EXPERIENCE

Data Analyst – Trainee | Qspiders

Aug 2024 – Present Bengaluru, Karnataka

- Performed exploratory analysis on structured datasets (10,000+ records) using Python and SQL across sales, HR, and customer behavior domains to support business performance analysis.
- improving reporting efficiency by 40%** Designed and automated KPI reporting dashboards in Power BI,
- reducing query execution time by 20%.** Developed optimized SQL queries using joins, aggregations, and window functions,
- Created stakeholder-facing visualizations with Matplotlib and Seaborn to communicate analytical findings and trends clearly.
- Cleaned and validated datasets by handling missing values, duplicates, and outliers, ensuring accuracy across reporting frameworks.

Web Development Intern | NSIC Technical Services Centre

Feb 2025 – Mar 2025 Chennai, Tamil Nadu

- Wrote SQL queries to extract backend data for performance monitoring and operational reporting.
- improving server response time by 15%.** Optimized MySQL database queries,
- driving a 30% improvement in page load times.** Analyzed user interaction data to identify performance bottlenecks,

KEY PROJECTS

Employee Attrition Analysis | Python, Pandas, NumPy, Seaborn, Matplotlib, Power BI, Excel

- Analyzed 1,400+ employee records using EDA to identify key turnover drivers and inform HR decision-making.
- Built end-to-end data cleaning pipeline (missing values, duplicates, format standardization), improving dataset consistency.
- Developed interactive Power BI dashboards visualizing attrition trends across departments, job roles, and tenure for executive reporting.
- Revealed employees with 1–2 years tenure and low satisfaction scores showed 40% higher attrition, enabling targeted HR interventions.

Road Crash Injury Severity Prediction | Python, Scikit-learn, Pandas, NumPy, Random Forest, Jupyter Notebook

- Built an end-to-end Random Forest classification pipeline on 5,000+ traffic incident records to predict crash severity.
- Achieved 85%+ model accuracy through hyperparameter tuning and cross-validation; evaluated using precision, recall, F1-score.
- Identified speed, road conditions, and time of day as top risk factors through feature importance analysis and visualization.

CERTIFICATIONS

- Tata – Data Visualisation Job Simulation (Forage)
- Deloitte Australia – Data Analytics Job Simulation (Forage)
- Google Cloud – Derive Insights from BigQuery Data
- Google Cloud – Prepare Data for ML APIs on Google Cloud
- Introduction to Generative AI – Google | AI For India 2.0 – NSDC | Python Programming – GUVI

EDUCATION

Bachelor of Engineering in Computer Science and Engineering | CGPA: 7.57/10.0

Anna University, Perambalur, India | July 2021 – July 2025
